

PDS Image Data Sheet Addendum

Paragon Development Systems has partnered with the US Environmental Protection Agency's **Energy Star** Program to promote energy efficient products and practices.

Significant energy savings can be attained by implementing power management options in the Operating System with little or no impact to the user.

PDS recommends the following power management settings to your image.

- Turn Off Monitor after 15 Minutes
- Allow system to Standby after 30 minutes.

See Microsoft Windows XP Power Option Properties dialog box below:

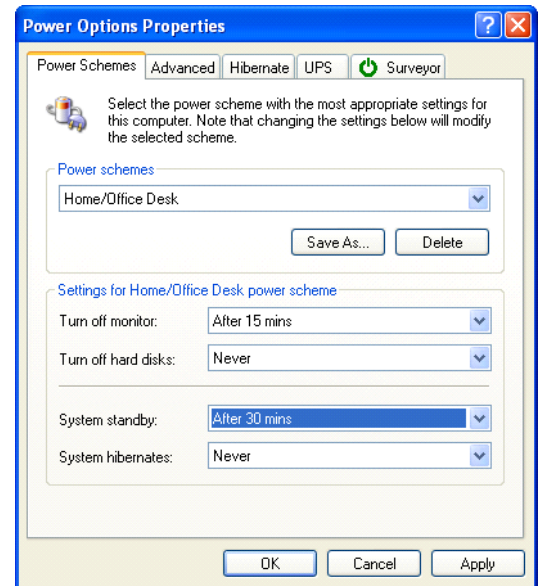

The following PDS systems are Energy Star certified and can be found on Energy Star's Web site <http://www.energystar.gov/>

- PDS Infinity / Vector CQ
- PDS Infinity / Vector JQ

Regardless of the manufacturer or hardware, enabling power management functions within the operating system can result in as much as \$60 in energy savings per year, per PC.

Operating System Patch Management can be a challenge for systems in energy savings mode. PDS offers several solutions to:

- Remotely wake systems,
- Apply Patches and allow systems to re-enter energy savings modes

Contact a PDS Account Director for additional information.
